

## A

### Meta-analysis random-effects

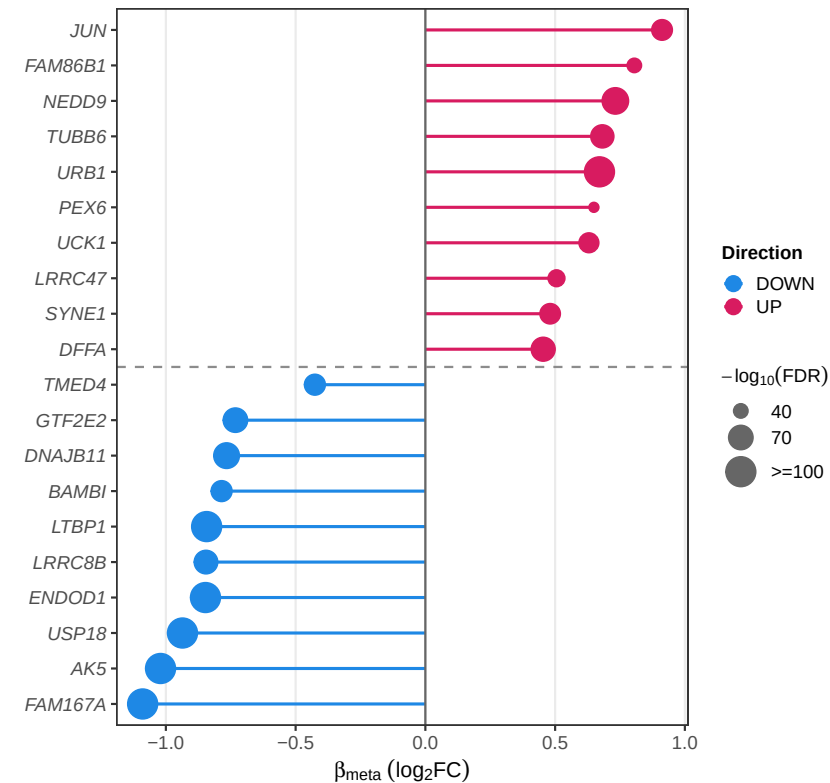

n genes: UP=613 DOWN=613 (FDR<0.05) | 361 high-confidence (k=3, I<sup>2</sup><50%)

## B

### High-confidence genes

k=3 datasets | I<sup>2</sup><50% | FDR<0.05  
n=10 UP + 10 DOWN

## C

### Meta-GSEA Hallmarks

Ranking: pooled effect size ( $\beta_{\text{meta}}$ ) | FDR<0.05 | n=8 pathways
